FEATURES

Cloud based e-commerce solution

BazarBit provides AWS based standard cloud based ecommerce solution to run smooth and easy your ecommerce store.

Multi Currency & Language

Online ecommerce store is not binded for specific area and language so to make availability of your store worldwide we provide multi-currency and multi-language facilities.

POS System

POS System is build for track and manage your online and offline stores activity. Even you can manage billing and inventory functions easily. POS system can integrated with third party solutions too. It will work as your independent solution too.

Inventory Management

Inventory management is provided with synchronize of your online store and offline store. Inventory can be managed with your multiple warehouses. It will save your time to get real time updates on stock.

Multi outlet

Multi Outlet functionality supports for managing multiple stores on your single dashboard. By this functionality Admin or Owner can get real-time updates of any store.

Multi Store / Ware house

Realize stock updates and availability from your ware houses. Get updates on stock down and growth.

Bulk Product Uploading

This functionality stands to upload multiple products at a time without any tedious and hassle work. By this functionality you can save more time and efforts in compare to upload single product.

Bulk Invoicing

By Bulk Invoicing functionality, multiple invoicing can be generated with selection of bulk orders at a time. It saves more time and effort rather than invoice creation of single order.

Affiliate Program

Affiliate Program is one type of revenue maker functionality. By this functionality store owner can boost sales and increase revenue by affiliating products of third party stores or market places.

Market Place

Market Place is one of the most beneficial solution for store owners who are selling their products on different market places like : Flipkar, Snapdeal, Amazon,etc. Through this solution store owner can manage product inventory and orders from single platform.

Social Media Plugin

Social Media Plugin is used to share product on social media pages as well for visitors who are opening your store and want to grab information from store's social media pages.

Payment Gateway Integration

We have pre-integrated multiple payment gateways across the world. So store visitor can buy his favorite items anytime and from anywhere. This solutions is more secure rather than other offline payment options.

FEATURES

Logistics Courier Service Integration

No need to set manual charges and wait of courier service availability. This feature provides facility to manage delivery of products. We have integrated multiple courier solutions to provide best courier facility from source to destination place.

SMS Integration

To keep updated user on his activities like registration, forgot password, mobile verification, purchases, delivery status, etc. Same thing can be used for promotion and offers to increase user engagement and boost sales.

Push Notification

For user engagement and provide store's new updates to registered users – Push Notification plays best role. Via Push Notification user can be updated for upcoming and current offers, new updates of store, promotions, etc.

SEO Optimized Web

SEO optimization is the most required functionality to make SEO of store online. We have developed all themes fully SEO optimized so it will be helpful in online marketing purpose.

App Analytics

We will provide google analytics data in proper manner and in meaningful terms. So you will get exact idea of your visitors and can normalize data for promotion and marketing purpose.

Depth Analysis and Report

Detailed and depth report will be provided to store owner including sales, registration, analytics, orders, products, etc. Reports will be presented in two ways: contents and graphical.

Cart Rules

Bazarbit allows to store owner that either he/she wants to sell particular product online or not. If yes then that particular product can be added in cart otherwise website visitor can make inquiry of that product.

Social Media Login

By this functionality website visitor can create account using social media options like : facebook, twitter, google plus, linked in, pinterest, etc. Also user can create account by submitting normal required fields on website.

User Privilege Management

Administrator can create and assign different roles to user who are given access of admin panel. Thus, each and every section of admin panel can be make secured and provide only right works right persons.

Promotion Code Management

Store owner can use this functionality to make promotion of offers and discounts on website to increase sales and also make user engagement efficient. Promotion code will be notified on mobile application as well as at cart page to inform users so they can easily take benefits.

Tax Module

Bazarbit provides flexible and easy tax creation module. By this module automatic tax will be calculated on product purchased by users.

Mega Menu

Organise your inventory into multiple groups and subgroups and be free from all sorts of management solutions. Manage your entire inventory efficiently with Bazarbit in the simplest way possible.
