

Things you need to know to buy the perfect laptop

Compared to desktop computers today almost everyone show huge interest towards using [Dell Xps Laptops](#). There is nothing to deny that laptops can offer extra comforts and the flexibility to take with you anywhere you go. Moreover, the availability of laptops with the equal and similar specifications and features that the desktop has also encourages people to use laptops more.

With this increasing requirement to buy laptops, there are also a few things that you need to know to choose the right one that will perfectly suit your expectations. In this aspect, here are a few things to help you understand before you shop your laptop:

- **Size:** The size of laptop would matter a lot if you a traveler and the place where you use it. You can find the laptops size ranging from 11.6 inches to even over 18 inches. Almost all brands of laptops are available in all sizes. However, if portability is your criteria then you need to look for smaller size, which will also be think and lightweight.

- **Screen quality:** Try to pay attention on the [quality of screen](#). Today you can also find laptops with touchscreen. These models are becoming popular and commonly used. They are easy to perform certain tasks. However, at the same time the glossy screen may cause reflections, which may not be favourable to perform certain activities like **gaming, editing images, watch video** etc. Therefore, at such circumstances, you may need to consider laptop with standard screen.
- **Keyboard:** If you have the requirement to type for long hours or a lot of content often, then you may need to choose the laptop with comfortable keyboard. Try to choose the keyboard with comfortable layout and full-sized keys. There should also be some space around arrow keys. Keys should also have adequate travel, particularly on down stroke and snappy responsiveness
- **CPU:** Not the least that you need to pay more attention to it. You can consider the [Intel Core Processor](#), which can offer best performances, particularly when it comes to multitasking and performing various multimedia tasks. Core i5 makes majority of the mainstream computers. Whereas, Core i7 based laptops offers excellent performance, however, when you use it for long hours you need to also consider the heat that comes through the base, which may cause some discomforts to you.
- **RAM:** It is not only these factors, but you should also consider, RAM which is not available more than 4GB.
